home LCP (lab estimate)

Summary

We crawled 11 pages of **https://seo.lordevo.com** (limit 50), starting from the home page and its menu and the XML sitemap (8 URLs listed). robots.txt was found and obeyed. No broken pages were found.

Nothing found that blocks Google from finding or indexing your pages. 1 issue type in total, 0 of them quick wins (easy fixes).

Fix first: top 1

#	Issue	Area	Severity	Effort	Items	What to do
1	Thin content (under 200 words)	Content	medium	hard	1	Expand key pages with useful, original text, or merge thin pages into stronger ones.

Google PageSpeed Insights: unavailable this run (Google's free PageSpeed service is busy (rate-limited). Try again later.). Our own lab measurement of the home page: LCP 616 ms, CLS 0, TTFB 238 ms (see Speed below).

Health by category

Category scores start at 100 and lose 25 / 10 / 4 points per high / medium / low issue type. The headline page score is the average of every page's own checks.

Prioritised fix plan by category

Content (1)

MEDIUM **HARD FIX** 1. Thin content (under 200 words) (1 item)

Pages with very little text rarely rank for anything.

Fix: Expand key pages with useful, original text, or merge thin pages into stronger ones.

- <https://seo.lordevo.com/contact> (118 words)

Speed: lab Core Web Vitals

Lab estimates from one unthrottled page load in a headless browser on a 412 px phone screen. Not real-user (Chrome UX Report) data; real phones on mobile data are usually slower. Google's "good" thresholds: LCP ≤ 2.5 s, CLS ≤ 0.1 , TTFB ≤ 0.8 s.

Page	TTFB	First paint	LCP	CLS	Weight	Requests
/	238 ms	616 ms	616 ms p	0	60 KB	9
/sample-report	123 ms	368 ms	368 ms p	0	60 KB	9
/pricing	222 ms	524 ms	524 ms p	0	60 KB	9
/order	178 ms	408 ms	408 ms p	0	60 KB	9
/how-it-works	128 ms	376 ms	376 ms p	0	60 KB	9

Server response across all crawled pages: median 229 ms (crawler, no browser).

Indexability matrix

8 of 11 working pages are indexable; 3 are not (error status, noindex or canonicalised to another address).

Page	Status	robots.txt	Meta robots / X-Robots-Tag	Canonical	In sitemap	Links in	Clicks from home	Indexable
/	200	allowed	index, follow	self	✓	9	0	yes
/pricing	200	allowed	index, follow	self	✓	9	1	yes
/order	200	allowed	index, follow	self	✓	9	1	yes
/how-it-works	200	allowed	index, follow	self	✓	9	1	yes
/contact	200	allowed	index, follow	self	✓	9	1	yes
/sample-report	200	allowed	index, follow	self	✓	10	1	yes
/privacy	200	allowed	index, follow	self	✓	9	1	yes
/terms	200	allowed	index, follow	self	✓	9	1	yes
/order?plan=audit	200	allowed	index, follow	→ /order	–	3	1	no canonical points elsewhere

Page	Status	robots.txt	Meta robots / X-Robots-Tag	Canonical	In sitemap	Links in	Clicks from home	Indexable
/order?plan=care	200	allowed	index, follow	→ /order	–	2	1	no canonical points elsewhere
/sample-report/full	200	allowed	–	→ /sample-report	–	1	2	no canonical points elsewhere

Internal links

Average 7.2 internal links point to each page; the deepest page is 2 clicks from the home page. We checked 1 internal link target(s) beyond the crawl and 6 outbound links: 0 broken internal link(s), 0 broken outbound.

Most linked

Page	Links in
/sample-report	10
/	9
/pricing	9
/order	9
/how-it-works	9
/contact	9
/privacy	9
/terms	9

Least linked

Page	Links in	Clicks
/sample-report/full	1	2
/order?plan=care	2	1
/order?plan=audit	3	1
/pricing	9	1
/order	9	1
/how-it-works	9	1
/contact	9	1
/privacy	9	1

XML sitemap

8 URL(s) in 1 sitemap file(s), listed in robots.txt. 8 have a lastmod date (2026-10-24 to 2026-10-24). Every listed URL we checked is indexable. 8 crawled page(s) are in the sitemap.

Sitemap file	Status	URLs
https://seo.lordevo.com/sitemap.xml	200	8

Structured data

5 of 11 pages have JSON-LD. Key types: ✓ Organization · ✓ WebSite · – Article · – Product · – BreadcrumbList · – LocalBusiness.

All types found: Service (5), OfferCatalog (5), Offer (5), Organization (5), ContactPoint (5), WebSite (5).

Images

0 distinct image(s) on the crawled pages; we checked the file size of 0: 0 over 200 KB, 0 large JPEG/PNG/GIF that could be WebP/AVIF. 0 image tag(s) have no alt attribute; 0 page(s) use lazy-loading.

Mobile

11 of 11 pages have a responsive viewport tag.

Page (412 px phone, lab)	Small tap targets	Text ≥ 12 px	Sideways overflow
/	0 of 21	99%	none
/sample-report	0 of 14	100%	none
/pricing	0 of 16	100%	none
/order	1 of 19	99%	none
/how-it-works	0 of 11	99%	none

International & language

Page languages (html lang): en (11). No hreflang annotations (only needed if you have versions of pages in other languages or for other countries).

Social sharing

8 of 8 pages have og:title, og:description and og:image. Home page preview:

Tag	Value
og:title	Free SEO Check for Your Website Lordevo SEO
og:description	Free instant SEO scan for your website by Bro, an AI SEO specialist. Get a score and plain-English fixes, then a full audit from US\$25.

What Is an SEO Audit? A Plain-English Explanation

An SEO audit checks your website the way a search engine sees it. It looks at whether Google can find your pages, read them and add them to its index, which is Google's list of pages it can show in search results. A good audit ends with a list of problems and a clear plan of what to fix first.

An SEO audit in one sentence

An SEO audit loads your pages like a search engine would, checks them against a set of rules, and tells you what's working, what's broken and how to fix it.

There are two common sizes:

A one-page scan. It checks a single page, such as your home page, to spot obvious problems. Our free scan works this way. Bro, our AI SEO specialist, runs 20+ checks on one page in about a minute.

A site-wide audit. It checks many pages and how they connect. Some problems only show up across the whole site, such as two pages with the same title, broken links between pages, or pages missing from your sitemap. Our Full SEO Audit crawls up to 50 pages with 60+ technical checks.

What an SEO audit looks at

Here are the check groups from our free scan, in everyday words.

Basics: HTTPS, redirects and status codes

HTTPS: the secure version of your address (the padlock in the browser). The audit also checks that the old `http://` address redirects, or sends visitors on, to the `https://` one.

Redirect chains: one address redirects to another, which redirects to yet another. Each extra step slows things down.

Status code: a short code the server sends back, telling the browser whether the page loaded fine, moved, or wasn't found.

Server response time, page size and compression: how fast your server answers, how heavy the page is, and whether it's squeezed down to load faster.

Content: titles, descriptions, headings and text

Title and meta description length: the title and short summary that often show in Google results. Too long and they get cut off. Too short and they say little.

H1 and heading order: the H1 is the main heading of the page. Headings should follow a sensible order, like chapters and sub-chapters.

Image alt text: a short text description of each image, used by screen readers and search engines.

Amount of text: pages with very little text can be hard for Google to understand.

Indexing: robots.txt, canonical tags and sitemap

These checks answer one big question: can Google find and index your pages?

robots.txt: a small file that tells crawlers (search engine robots) which parts of your site they may visit.

Robots meta and X-Robots-Tag: page-level instructions that can tell Google not to index a page. If one is set by mistake, the page can vanish from search.

Canonical tag: points to the main version of a page. It helps when the same content can be reached at more than one address.

XML sitemap: a list of your pages made for search engines.

Structured data (JSON-LD): extra code that describes your content to search engines in a fixed format.

Mobile, speed and social sharing

Viewport and language tags: the viewport tag helps your page fit a phone screen. The language tag tells search engines which language the page is in.

Core Web Vitals: speed and stability measures used by Google. Our free scan gets these from Google PageSpeed Insights.

Open Graph and X cards: tags that control how your page looks when it's shared on social media.

Links and a broken-link sample: a check of some of the links on the page, to see if any are broken.

How the crawl works

Following your menu and sitemap

Bro follows redirects, reads the HTML (the code behind the page), checks robots.txt and the sitemap, and tests links.

In the Full SEO Audit, the crawl starts with your home page, then your menu and your sitemap, so the pages that matter most are checked first. Some sites build their content with JavaScript, in the browser. The audit renders those pages, so it sees the text a visitor would see.

Obeying robots.txt

A polite crawler respects your rules. If your robots.txt blocks a folder, Bro won't visit it. That respects your wishes and shows you what search engines are allowed to see.

A common mistake is a rule left over from building the site that blocks the whole site. An audit will catch this.

You can read more about [how the scan and audit work](#).

What you get at the end

A score and health by category

Every check is marked **pass**, **warning** or **fail**. The free scan gives one page a score from 0 to 100.

The Full SEO Audit also gives a health score for each category: Indexability, Links, Content, Performance, Mobile, HTTPS and security, Structured data, Images, International, Social sharing and AI discoverability.

It also includes an indexability matrix. This is a table that shows the status, robots rules, canonical, sitemap and internal links for every page crawled.

A fix-first plan

The most useful part of an audit is the order of the fixes. The Full SEO Audit starts with an executive summary, a short overview that puts traffic risks first, then lists the top 10 fixes with the effort each one takes.

Why order the fixes by priority and effort?

A page blocked from Google is more urgent than an image missing alt text.

A quick, easy fix is worth doing now, even if it's small.

A hard fix, like expanding thin pages, can be planned for later.

Want to see what this looks like? Here's [a real SEO audit report](#) of our own site, made by the same code that audits customer sites. It crawled 11 pages (limit 50) and found one issue type: thin content.

What an audit can't do

It finds problems. It doesn't promise rankings. No honest audit can promise you a spot on Google. It shows what's getting in the way so you can fix it.

Lab speed numbers are estimates. The Full SEO Audit measures speed in a test browser set up like a phone. These are lab estimates, not data from real visitors.

Google's service is sometimes busy. The free scan gets speed data from Google PageSpeed Insights. If that free service is busy, that item may not show a result.

It checks. It doesn't fix. You, or the person who looks after your website, make the changes. The audit tells you what to change and where.

Limits apply. The free scan checks one page per scan, with up to 5 scans an hour. The Full SEO Audit covers up to 50 pages.

When to get one

Good times to run an audit:

After a redesign, or after a move to a new website builder.

After moving your site to HTTPS.

When visitors from Google drop and you don't know why.

Before you spend time or money on new content.

Not sure yet? Start with a free scan of one page. If it shows problems, or you want the whole site checked, the Full SEO Audit is the next step. It costs US\$25, one-off. For ongoing checks, Monthly

SEO Care costs US\$35/month. We also offer website security checks. You'll find all of these on our [pricing page](#).

FAQ

How long does an SEO audit take?

The free scan takes about a minute. The Full SEO Audit report usually arrives in your inbox within minutes, and always within 24 hours.

Do I need to install anything?

No. There's no setup and nothing to install. You paste your address and Bro does the checking. The free scan needs no sign-up.

Will an audit improve my rankings?

Not on its own, and we don't promise it will. An audit shows what may be holding your site back on Google. Fixing those problems is up to you, and results depend on many things outside any audit.

How many pages does an audit cover?

The free scan covers one page. The Full SEO Audit crawls up to 50 pages, starting with your home page, menu and sitemap.

What does it cost?

The free scan costs nothing. The Full SEO Audit is US\$25, one-off. Monthly SEO Care is US\$35/month.

Try it on your site

Run a [free SEO check](#) of your home page. It takes about a minute and gives you a score with plain-English fixes. When you want the whole site covered, order a Full SEO Audit. It checks up to 50 pages and gives you a fix-first plan.
